CEMP	Construction Environmental Management Plan
RFF	Rescue Fire Fighting
WWTP	Waste Water Treatment Plant

Executive Summary

The 1st Annual Environmental Report is the result of FG's compliance to the Environmental Requirements set in the Concession Agreement, three months after the Concession Commencement Date of the 11th of April 2017.

The Environmental Strategy outlines the methods to minimize environmental impacts during the implementation of infrastructure upgrades and growth in operations in response to the 2017 Master Plans. Additionally, the strategy details the ongoing high quality environmental management of the airports.

The specific objectives and targets outlined in this Environment Strategy will provide a framework to ensure social, economic, and environmental goals are reflected in the development and every day running of each airport.

Environmental aspects addressed are: sustainable development, soil management, surface and groundwater, biodiversity, cultural heritage, air quality, noise and waste management. Potential impacts are presented for every environmental aspect, along with preventive actions.

Finally, for each environmental aspect specific targets are presented accompanied with a respective fulfilment timeframe.

1 Introduction

1.1 About Fraport Greece

FG was created in 2015 and is responsible for maintaining, operating, managing, upgrading and developing 14 regional airports in Greece over a period of 40 years.

The operational transfer of the airports to **FG** took place on April 11th, 2017. At the time of the project closing full payment of the €1.234 billion upfront concession fee was made by Fraport Greece in tandem with the transfer of operations at the 14 airports. Along with the upfront concession payment, an annual fixed concession fee of initially €22.9 million and a variable annual concession fee of on average 28.5% of the operational profit will be paid every year.

Two separate, almost identical concessions were granted by the Greek State in an international tender process, each applying to seven of the 14 airports ("Cluster A" and "Cluster B").

FG consists of two concession companies with their corporate seats in Athens, one company for Cluster A named "Fraport Regional Airports of Greece A S.A." ("Fraport Greece A", FGA) and one company for Cluster B named "Fraport Regional Airports of Greece B S.A." ("Fraport Greece B", FGB).

Management Company, a third company with its corporate seat in Athens, is acting as management company and is responsible for central functions on behalf of Fraport Greece A and Fraport Greece B, such as employment of staff and contracting of advisors or suppliers.

The Athens headquarters employ more than 150 people and a total of 390 people are employed at the 14 airports.

The shareholders of **FG** are Fraport AG Frankfurt Airport Services Worldwide and Copelouzos Group.

Cluster A under the Concession Agreement of Cretan, Continental Greece and Ionian Sea Regional Airports, includes the following 7 airports:

- Thessaloniki (SKG),
- Kerkyra (CFU),
- Kefalonia (EFL),
- Zakynthos (ZTH),
- Aktion (PVK),
- Kavala (KVA) and
- Chania (CHQ).

1.2 Environmental Strategy Annual Report Concession Agreement Requirements

Fraport Regional Airports of Greece (**Fraport-Greece**) (**FG**) has entered into a 40-year Concession Agreement (CA) with the Hellenic Republic (HR), represented by the Hellenic Republic Asset Development Fund (HRADF). The Concession Agreement was ratified by means of the Law 4389/2016 (GG94/27.05.2016).

The Concession Agreement, according to Article 13. Environment Protection – 13.2 Environmental Requirements – 13.2.2. requires the Concessionaire to compile, throughout the Concession Period, an annual report on environmental strategy, which shall be submitted to the State within three (3) months of the Concession Commencement Date (CCD) and each anniversary thereof. The Concessionaire is also obliged to create and maintain an internet site where the aforementioned report shall be published.

1.3 Structure of the Environmental Strategy

The Environmental Strategy outlines the airports methods to minimize environmental impacts during the implementation of infrastructure upgrades and growth in operations in response to the 2017 Master Plans and details the ongoing high quality environmental management of the airports. The specific objectives and targets outlined in this Environment Strategy will provide a framework to ensure social, economic, and environmental goals are reflected in the development and every day running of each airport.

Environmental aspects addressed are:

- Sustainable development;
- Soil management;
- Surface and groundwater;
- Biodiversity;
- Cultural heritage;
- Air quality;
- Noise;
- Waste Management.

Potential impacts are presented for every environmental aspect, along with preventive measures.

Finally, for each environmental aspect specific targets are presented accompanied with a respective fulfilment timeframe.

2 Environmental Policy

The Management Board of **FG** has adopted an integrated environmental policy for all our business locations (headquarters and airports), having defined environmental and social protection as one of our main company goals. Environmental protection is the responsibility of all employees that need to realize the importance of their duties, take active participation in meeting the common goals and willingly commit to the results of their activities.

In this context:

- We are managing, operating and developing all our units in an environmentally responsible way in compliance with the applicable laws, regulations and other commitments.
- We are developing, applying and systematically improving our Environmental Management System and seek for continual improvement of our environmental performance.
- We are promoting greater environmental responsibility by training our employees and providing awareness programs for all concerned parties.
- We support a precautionary approach to environmental challenges respecting the principles of cost-effectiveness, economic viability and sustainability.
- We encourage the development and dissemination of environmentally friendly

practices and technologies by applying environmental criteria when selecting goods and services.

- We engage in a regular dialogue with our community stakeholder groups and we incorporate their concerns and points of view in our corporate decision-making process. We communicate closely with our partners in the air transport value chain and work together to develop joint strategies and concepts directed towards continual improvement of environmental performance.

To meet our goals and targets towards sustainability and environmental protection, we focus on the following key environmental aspects:

1. Protection of natural environment, including wildlife management;
2. Resource use and waste minimization;
3. Waste management (hazardous, non-hazardous);
4. Wastewater management;
5. Energy management, carbon emissions and climate change;
6. Pollution prevention and emergency response;
7. Noise management; and
8. Traffic management.

3 Legal and Stakeholder Requirements

3.1 Legal Requirements

Environmental aspects of airport activities are largely governed by national legislation which is in accordance to the European Directives.

National regulations and standards are used as the foundation for environmental programming and performance.

FG, also abides by the E&S Designated Performance Requirement, which means the applicable Alpha Bank Performance Standards as per the 25.7.2016 E&S Policy, the IFC Performance Standards; the EBRD Designated

Performance Requirements and the EIB. The environmental guidelines of each bank are publicly disclosed.

In the interest of responsible and sustainable environmental management, **FG** will endeavour to meet or exceed additional self-imposed standards, including the adoption of applicable international regulations. Tenants at **FG** airports are also required to uphold the same standards.

3.2 Approved Environmental Terms

Each airport operates under Approved Environmental Terms which ensure the optimal operation of the airport regarding the protection of the environment.

The terms set limits, guidelines and monitoring patterns adjusted to each airport individually, defending each environmental aspect.

A/A	Airport	Environmental Terms Approval
1	PVK	<ul style="list-style-type: none"> • 11543/07.03.2017
2	ZTH	<ul style="list-style-type: none"> • 43392/96/17.02.1997 as it has been modified and extended by the following: <ul style="list-style-type: none"> ○ 127597/02.07.2010 ○ 175512/15.10.2014
3	SKG	<ul style="list-style-type: none"> • 105214/17.11.2000 as it has been modified by the following: <ul style="list-style-type: none"> ○ 125887/08.05.2007 ○ 204012/05.10.2011 ○ 12763/10.03.2016
4	KVA	<ul style="list-style-type: none"> • 84821/95/08.07.1996 as it has been modified by the following: <ul style="list-style-type: none"> ○ 105624/14.11.2006

A/A	Airport	Environmental Terms Approval
		<ul style="list-style-type: none"> ○ 200818/23.07.2012 ○ 172044/09.04.2014
5	CFU	<ul style="list-style-type: none"> ● 11945/08.03.2017
6	EFL	<ul style="list-style-type: none"> ● 32647/94/09.05.1995 (as it has been modified by the following: <ul style="list-style-type: none"> ○ 106586/08.08.2006 ○ 151698/04.09.2015
7	CHQ	<ul style="list-style-type: none"> ● 51226/25.10.2016

Table 2: Approved Environmental Terms Decisions for all 7 airports of Cluster A.

3.3 Stakeholder Requirements

As a community-based organization, we value the relationships we build with our business partners and surrounding communities.

Stakeholder engagement is being currently carried out and is also planned for the upcoming stages of project implementation. Prior to the start of construction activities, a site specific plan Stakeholder Engagement Plan (SEP) will be developed for each airport.

The SEP outlines a systematic approach to stakeholder engagement that will help **Fraport Greece** develop and maintain over time a constructive relationship with their stakeholders throughout the duration of the Concession period.

Roles and Responsibilities

Each plan will contain information on the following:

- specific works that will take place at each airport
- stakeholders who may be affected or interested in the works
- timeline for any consultation activities;
- communication tools and
- details of grievance process and contacts and local contact information.

Role	Responsibility
Fraport Greece	<ul style="list-style-type: none"> • Overall responsibility for implementing the environmental requirements specified by the legislation and the Environmental and Social Management Plan • Auditing contractors, tenant and other airport operators' compliance with relevant environmental obligations. • Reviewing and/or approving tenant and operators' environmental management plans. • Promoting best practice environmental management to tenants, operators and contractors.
Tenants & Operators	<ul style="list-style-type: none"> • Responsible for preventing environmental harm. • Meeting statutory environmental requirements • Ensuring appropriate plans and/or systems are in place to manage environmental risks posed by activities.

Table 3: Roles and responsibilities

The relevant stakeholders identified per category are:

- Local population
- Airport Employees
- Grantor, Government and Public bodies
- Non - Governmental Organizations
- Professional associations
- Scientific Organizations
- Media
- Vulnerable groups (which may include people with disabilities, refugees, cultural or religious minorities groups, etc.)
- Customers and economic partners
- Financial partners

Graphic 1: Stakeholder categories

4 Cluster A Airports

4.1 Location and Airport Environment

Thessaloniki (SKG)

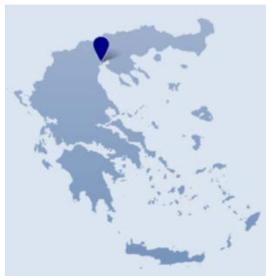

Figure 1: SKG Airport

Thessaloniki International Airport “Makedonia” is located in the municipality of Themi and is around 16km south east of the city of Thessaloniki, the second largest city in Greece. The airport is the third largest in Greece by the number of passengers and the second largest in terms of air traffic movements. The airport incorporates both civilian and Military use.

Near the airport of Thessaloniki there are no protected areas of environmental significance, however Thermaikos Gulf is a “sensitive recipient” and requires special attention in the overall environmental management.

Prohistorical settlement “Touba Livadaki” is sited within airports limits at the military area.

Kerkyra (CFU)

Figure 2: CFU Airport

Kerkyra International Airport “Ioannis Kapodistrias” is an Ionian island airport located in Kerkyra, three kilometres south of Kerkyra town, in the coastal sea area between Kanoni and Mesoggi villages. The island of Kerkyra is one of the most popular tourist destinations in Europe, attracting visitors from the UK, Scandinavia, Germany, Italy and Austria.

The protected areas affecting the airport are:

- Natura GR2230005 (SCI, SAC) in the southeastern part of the airport

- “Particular Natural Beauty Areas” of Chalkiopoulou Lagoon & Pontikonisi Peninsula

“Old Kerkyra Town or Palaiopoli” (boundaries in the within the NE boundary of the concession area.

Kefalonia (EFL)

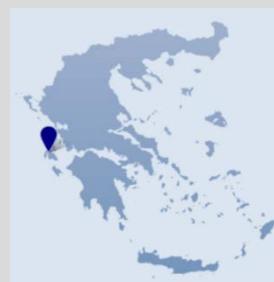

Figure 3: EFL Airport

Kefalonia International Airport “Anna Pollatou” is located near Svoronata village, about 8 kilometres south of Argostoli, the capital of Kefalonia.

The protected areas affecting the airport are:

- Natura GR2220004 (SCI, SAC) in the south part of the airport. The site covers the marine area from the entrance of Argostoli Gulf and expands towards the village of Lourdata.

The presence of the marine phanerogam *Posidonia Oceanica* is of ecological importance.

Zakynthos (ZTH)

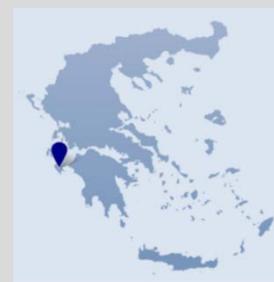

Figure 4 ZTH Airport

Zakynthos International Airport “Dionysios Solomos” is located in the south east of the Island of Zakynthos, which is in the western Ionian Sea near the town of Kalamaki. The airport is around 4 km from the capital of the island, the town of Zakynthos.

The airport is within the boundaries of 'National Marine Park of Zakynthos' and Natura GR2210002 (SCI, SAC) area. The coastal zone of Laganas presents high biological significance because of the occurrence of habitats for the species *Caretta caretta*. In order to protect the species, the airport does not operate during nighttime (22:00-05:00).

Aktion (PVK)

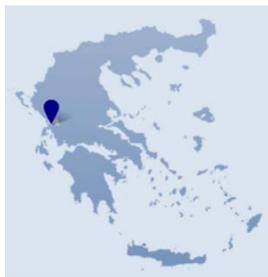

Figure 5 PVK Airport

Aktion International Airport is located on a peninsula between Preveza (4km), Vonitsa (16km) and Lefkada Island (20km). The airport, including both civil and military areas, covers 2,665,159m².

The airport is near the protected area Natura GR2310006, (SCI, SAC) as well the "National Wetland Park Amvrakikos". The coastal parts of the area are of ecological importance. Airport expansion towards the coastal area to be avoided or minimized and necessary measures taken to ensure biodiversity conservation

Kavala (KVA)

Figure 6 KVA Airport

Kavala International Airport "Megas Alexandros" is located approx. 15 km South-East of the Kavala town and 7,5 km South west of Chrysoupoli town in Northern Greece, approx. 160 km from Thessaloniki.

The airport incorporates both civilian and Military use.

The airport is in close proximity to Nestos Delta that consists of agricultural land with few freshwater lagoons separated from the sea by narrow sandy strips. The protected Natura areas located in the west part of airport are:

- GR1150001 (SPA) & Delta Nestou Kai Limnothalasses Keramotis Kai Nisos Thasopoula
- GR1150010 (SCI, SAC) Delta Nestou Kai Limnothalasses Keramotis - Evryteri Periochi Kai Paraktia Zoni

Chania (CHQ)

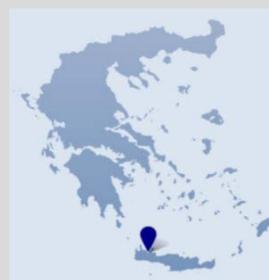

Figure 7 CHQ Airport

Chania International Airport "Ioannis Daskalogiannis" is located in the Akrotiri peninsula in the north-west of the Island of Crete, the largest of the Greek islands. The airport is around 15 km from the town of Chania and 100 km from the capital of the island, Heraklion. The airport includes both civilian and military areas. Near the airport of Chania there are no protected areas of environmental significance.

5 Planning for the future

FG will invest a total of at least €330 million in airport infrastructure until 2020, followed by maintenance and traffic-driven capacity investments during subsequent years of the project.

The proposed works in Cluster A include:

- **4 Runways will be refurbished** namely those of Kerkyra (CFU), Kefalonia (EFL), Zakynthos (ZTH) and Kavala (KVA)
- **Terminal will be refurbished and expanded at 4 airports:** Aktion (PVK), Thessaloniki (SKG), Kefalonia (EFL) and Kerkyra (CFU) will be refurbished and expanded.
- **Terminal remodeling will take place at 3 airports:** Chania (CHQ), Kavala (KVA) and Zakynthos (ZTH).

5.1 Future works

Thessaloniki (SKG)

Imminent Works	Description
Terminal	Terminal expansion by a New building in three levels
RFF	New RFF station in a new location next to the existing
Road & Parking	New access road for the new terminal
Utilities	Connection to the public sewage network Utilities new connections

Figure 8: Future SKG Airport view

Kerkyra (CFU)

Imminent Works	Description
Terminal	Terminal expansion in two level and remodelling of the existing
Apron	Expansion of the apron
Road & Parking	Remodelling of the internal roads and existing parking spaces and provision of new parking areas
Utilities	Installation of oil separators for storm water treatment

Figure 9 Future CFU Airport view

Kefalonia (EFL)

Imminent Works	Description
Terminal	Terminal expansion by new building in three levels
RFF	New RFF station in a new location next to the existing
Road & Parking	Remodelling of the internal roads and existing parking spaces and provision of new parking areas
Utilities	Installation of new WWTP in a new location New water tank serving new RFF

Figure 10 Future EFL Airport view

Zakynthos (ZTH)

Imminent Works	Description
Terminal	Refurbishment remodelling of the existing
RFF	New RFF station in a new location next to the existing
Other	New building for electromechanical equipment
Utilities	Installation of sand trap for storm water treatment

Figure 11 Future ZTH Airport view

Aktion (PVK)

Imminent Works	Description
Terminal	Terminal expansion of the existing in two level and remodelling
Road & Parking	Remodelling of the existing parking areas to increase parking slots and traffic reconfiguration
Utilities	Upgrade of the existing WWTP

Figure 12 Future PVK Airport view

Kavala (KVA)

Imminent Works	Description
Terminal	Terminal expansion of the existing in two level and remodelling
RFF	Expansion of the existing RFF in both levels
Utilities	Connection to the public sewage network

Figure 13 Future KVA Airport view

Chania (CHQ)

Imminent Works	Description
Terminal	Internal expansion for retail
Utilities	Connection to the public sewage network

Figure 14 Future CHQ Airport view

5.2 What has already been achieved

Up until now [Master Plans for all 7 airports have been submitted](#). Each Master Plan determines an ultimate overall layout that will best utilise the potential of the airport campus and optimise the use of existing infrastructure that best fits the expected traffic volume and characteristics over the next 20 years.

[Modification Dossiers of the Approved Environmental Terms](#) for every airport have been submitted to the Ministry of Environment and Energy. The dossiers contained Environmental Impact Assessment Studies that describe the Imminent Works, evaluate the potential environmental impact and propose protective actions.

For the assessment of the current status of the environment and the existing contamination an [Environmental Baseline Survey](#) was conducted in every airport. The survey recorded

- Soil contamination
- Surface and underground water contamination
- Waste disposal

[Environmental Baseline Survey for Sewage Treatment Plants](#) for the evaluation and monitoring of the effectiveness of the existing Waste Water Treatment Plants (WWTP) which

are located in Aktion (PVK), Kefalonia (EFL), Thessaloniki (SKG) and Chania (CHQ). Improvements were proposed for the existing facilities in order to upgrade them. [Maintenance and upgrade works of the WWTPs](#) are of high priority for FG.

[Noise Baseline Survey](#) for the peak period of 2016 at each airport, which included on site measurements and raw data collection. The data were evaluated, noise contours were calculated, and the subsequent noise trends were presented.

In cooperation with the National and Technical University of Athens an Interim [Air and Noise and Monitoring Plan](#) was implemented for each airport and was included as an Annex in the EIA Studies. The interim plan proposed a comprehensive air pollution and noise monitoring system that can replace the existing requirements of the existing Environmental Terms.

[Climate Change Resilience Study](#) in order to identify and ensure that climate-related risks and opportunities are identified early on and managed effectively, by integrating the findings of this study in the airport's Master Plans.

[Asbestos Baseline Evaluation](#) in order to identify the current conditions regarding the presence of asbestos materials in the existing infrastructure of the airport's buildings. In each airport all asbestos materials were identified and characterized as low, medium or high risk. For the management of these materials recovery actions were proposed and removal will take place as part of Imminent Works.

5.3 What could happen to the environment

- [Physical Environment](#) - All the proposed works are located within each airport's existing boundary. During construction of the proposed works no major issue from dust is anticipated.
- [Subsurface and Soil](#) – Soil compaction will generally occur during most of the construction activities involving heavy machinery, especially when the soil is wet.

The main impact during construction will occur from the excavation due to the construction of the expansion works. It is expected that the morphology and the

surface characteristics of the surrounding area will not have major impacts during the construction of the proposed works.

- c. Water Resources – Possible water pollution sources are the storm water runoff of the construction site, or other runoff and possible accidental oil or fuel leakage. Water consumption for construction purposes is considered not significant. Regarding the urban wastewater, the estimated loads from the construction site is not expected to significant bear down each airport's area.
- d. Landscape & Visual Amenity - During construction there will be impacts on landscape and visual amenity but these are not considered significant and will be short – term and totally reversible. It should be noted that the proposed works are designed to be consistent and enhance the area's aesthetics.
- e. Acoustic Environment – The proposed works are likely to result in local noise disturbance from construction activities and machinery. No significant impact (noise or vibration) is expected on residential properties from blasting and hammering as the majority of these activities will take place within the terminals.
- f. Solid Wastes / Toxic and Dangerous Wastes - For the waste produced during construction, the estimated quantities will not affect the existing management methods.
- g. Socioeconomic Environment - For the socioeconomic environment opportunities and benefits are expected from the construction of the proposed works. It is estimated that significant employment positions will occur during construction.
- h. Cultural Heritage – Potential sites within the Project footprint will be investigated further

prior to construction. Any findings will be addressed in cooperation with the Local Archaeological Authorities.

5.4 Imminent Actions

Actions regarding environmental protection and

1. Monitoring plans

Monitoring plans will be implemented for each of the following environmental attribute:

- air (including CO₂ emissions),
- noise,
- water,
- soil.

The frequency of the monitoring will be set according to the respective Environmental Terms.

2. Waste Management Plan

FG is already in the process of creating a Pilot Waste Management Plan for Thessaloniki airport that will later on be used as a guide for the implementation of WMPs for the remaining airports.

3. Recycling of Hazardous Waste

In compliance with the relative legislation regarding waste management and recycling **FG** is signing contracts with Alternative Management Systems in order to manage the recycling of hazardous waste such as:

- Used Mineral Oils,
- Old Tires,
- Electrical and electronic Equipment,
- Batteries and Accumulators.

4. Wildlife Management Plan

5. Monitoring of Greenhouse Gases (GHG)

6 Sustainable Development

6.1 Overview and Objectives – Environmental and Social Management Plan

Company Objectives:

The objective of **FG** is the safe, secure, and efficient management of the 7 Greek Regional Civil Airports of Thessaloniki (SKG), Kerkyra (CFU), Chania (CHQ), Zakynthos (ZTH), Kefalonia (EFL), Aktion (PVK) and Kavala (KVA).

FG provides the infrastructure and the necessary services for meeting, sending off and serving of airplanes, passengers, baggage, cargo and mail according to the best practices and the applicable legislation.

FG aims to create a pleasant passenger experience for its customers, thus creating new business opportunities for concessionaires and service providers; as well as to make our airports attractive and environmentally friendly destinations for passengers, tour operators and airlines in the region.

We will constantly improve the quality of our services, productivity and environmental performance in order to keep our market place in the long term.

FG ensures that:

- We communicate our environmental policy to all employees and persons working on our behalf.
- We communicate this policy and the results of our activities to our Shareholders and to Second and Third parties as appropriate and to the Public.
- We maintain and continuously improve our environmental policy and Management System.
- We will establish and review objectives and targets for the Environment (along with the Quality, and Health & Safety ones).
- This environmental policy will be reviewed on an annual basis.

Requirements

FG incorporates, as applicable, Fraport AG policies, established procedures and management systems in the development of its own respective documents.

FG is implementing an Environmental Management plan sufficient to address the environmental and social impacts and issues associated with each airport project.

Through the development of the airport masterplans, **FG** minimized the need for land acquisition and mitigated or eliminated any degradation or disturbance of landscape features, disturbance of wildlife habitats or altering of heritage buildings and monuments.

FG, through promotion of sustainable growth of air-travel, will benefit local communities by boosting regional financial activity and job creation. The project will influence sustainable local working conditions and hiring, both by **FG** and business partners.

The Environmental Management System is in compliance with all ordinances, statutes and regulations of Greek State Agencies and European Union legislation related to the protection of the Environment, as required of enterprises such as ours.

The approved EPC contractor as well as the fuel handlers in the airports hold ISO14001 certification or equivalent.

The EPC agreement requirements specify that the contractor shall elaborate and enforce a project specific Construction Environmental Management Plan (CEMP).

6.2 Environmental dimension as incorporated in planning and designs

Airport tenants, contractors and operators are required to ensure appropriate systems and procedures are in place to manage specific environmental risks associated with their activities from resources consumption. Tenants are encouraged to conserve energy through KENAK, the Greek state “Regulation on the Energy Performance of Buildings” and the technical guidelines issued by the Technical Chamber of Greece to be applied to all new and extensively renovated airports buildings. Recommendations are made to tenants during audits on methods to reduce their energy and resource consumption and waste generation.

FG will inspect each airport, tenant, contractor and operator activities. Where excessive

resource consumption is observed, airport operators are required to monitor and reduce this consumption.

Energy

Energy conservation as already incorporated in the design will be achieved through:

- Terminal use minimization during winter period by isolating unnecessary parts of the buildings with minimal use.
- Protection of the building against outdoor adverse conditions by enhancing shell insulation specification, solar protection glazing and / or external shading.
- Use of natural light preferred where possible.
- High efficiency chilled and hot water production equipment.
- Adjustable energy consumption to variable load demand (variable flow systems).
- Energy recovery systems in the air-handling units' design and free cooling and night cooling mode concepts.
- Installation of active power harmonic filters.
- Upgrade to low energy consuming lighting fixtures and automated lighting controls.
- Energy Management System in connection for monitoring energy consumption, providing trends and correlation data and introducing effective related controls.
- Energy Balance report as design deliverable that will constitute the base

line for the elaboration of the Energy Management System.

- Identify high level renewable energy opportunities (e.g. geothermal HVAC applications).

Water Conservation and Quality

- Site-wide drainage and wastewater monitoring schemes as appropriate.
- Landscaping that features xeriscape and drought-tolerant species.
- Monitoring to track water consumption.
- Storm water pollution prevention plan for all new construction.
- Spill traps/management, oil separators and closed fuel delivery systems as foreseen in the environmental terms.
- Refurbishment of existing Waste Water Treatment Plants and connection to local sewage network for SKG, CHQ and KVA.

Resources (materials and waste management)

Selection of **materials** that reflect our sustainability approach will consider, when possible, the following criteria:

- Reuse of building & appropriate excavation materials onsite
- Future use of lower biochemical oxygen demand (BOD) de-icing materials.
- Use of nontoxic pest-control products.
- Use of construction materials & interior finishes with high recycled content and low VOC paints is encouraged

Target	Timeframe
Develop a carbon management strategy and associated management plans to reduce each airports carbon footprint.	Ongoing - within 1 st year of operations
Undertake waste management review and audit to identify opportunities for waste reduction and diversion from landfill.	Ongoing - within 1 st year of operations
Incorporate resource use efficiency measures for new developments. Implementation of an Energy Management System	Ongoing – Upon completion of Imminent Works
Ensure CEMPs incorporate measures to minimize draw on natural resources and maximize diversion of waste from landfill during the construction phase of developments.	Ongoing – Prior to Imminent Works commencement

Table 4: Targets for sustainable development

7 Soil Management

7.1 Overview

FG's objective is to protect soil from airport activities and appropriately manage and/or rehabilitate any contaminated sites.

The majority of contaminated sites are associated with historic activities on and off each airport including hydrocarbon spills, landfill activities and constituents of firefighting foams.

Some activities that could affect soil are:

- Construction and earthworks.
- Grounds maintenance including vegetation removal and weed control.
- Storage, handling, use and disposal of hazardous materials.
- Aircraft refuelling, vehicle and aircraft wash down.
- Aircraft, vehicle, mechanical plant and electrical equipment maintenance.
- Car parking.
- Waste management infrastructure, storage and disposal.
- Demolishing buildings containing hazardous materials.
- Surrounding land use.

These activities could cause:

- Contamination from spillage, leakage, seepage, or residual runoff from hardstand areas.
- Migration of existing contamination from the original source through natural pathways or disturbance during construction.
- Erosion.

7.2 Soil Management Action Plan

FG will regularly inspect the airport, tenant, contractor and operator activities. Where there is soil or groundwater contamination caused by their operations, airport operators will be required to undertake relevant measures to monitor, manage or remediate the contamination (obligation imposed by the Approved Environmental Terms).

According to article 13.4. of the Concession Agreement FG will aim to remediate any identified pre-existing contamination within the concession sites.

Actions to manage potential impacts to soils include:

- Periodic measurement campaigns to evaluate soil pollution and surveys of contaminated sites.
- Decontamination of polluted zones and soil remediation.
- Activities with the potential to contaminate soil or groundwater will undergo a risk assessment to inform appropriate management procedures.

CEMP's prepared for relevant construction projects addressing potential soil impacts including contaminated land management measures.

Airport tenants, contractors and operators are required to ensure appropriate systems and procedures are in place to manage specific environmental risks associated with their activities.

Target	Timeframe
Remediation of any identified pre-existing contaminated areas	Up to 2021 (Imminent Works completion)
Re-use of excavation and demolition products	In imminent and future works
Coastline Monitoring	In Thessaloniki as appropriate after the completion of State Works
Ensure CEMPs incorporate measures to minimise potential adverse impacts to soil associated with contraction activities.	Ongoing – Prior to Imminent Works commencement

Table 5: Targets for soil management

7.3 Achievements (with respect to soil conservation)

Already since 2016, an [Environmental Baseline Survey](#) took place in order to identify pre-existing contaminated areas.

In all FG airports specialized personnel conducted on site visits in order to record the existing contamination. In each airport a number of ditches were performed in order to examine both surface and underground soil contamination.

The works were split in two phases where the following were achieved:

Phase I

- Collection and analysis of all available baseline data
- Site visit and inspection of the operating companies
- Detection of areas of environmental concern

Evaluation of the collected desktop and site visit data a specific soil / subsoil sampling and analysis program was finalized for the next investigation phase (Environmental Phase II investigation).

Phase II

- Definition of the soil and groundwater conditions at the selected areas of environmental concern at the airport site.
- Assessment of the environmental risk stemming on potential subsoil contamination for the specific site.
- Proposal of necessary actions for the protection of soil.

Each survey concluded in proposing remedial actions, for the contaminated soils (contaminated unsaturated zone especially by oils and petroleum) that were identified.

These actions included the application of the following methods:

- Soil vapour extraction.
- Bioventing in situ.
- Removal of the contaminated soil by excavation.

8 Surface Water and Groundwater

8.1 Overview

FG's objective is to protect surface water and groundwater from airport activities and appropriately manage or rehabilitate any contaminated sites.

The majority of the airports of Cluster A, with the exception of Chania (CHQ), are near coastal areas and are typical of coastal environments. Being close to the sea, surface and groundwater levels and quality can be susceptible to quality and quantity alterations affected by sea level rise, tidal influences and flooding.

In addition, some activities that could affect water quality may be:

- Changes to the drainage network, leading to increased flow velocities or reduced flood storage capacity.
- Development that creates increased impermeable areas and increased runoff.
- Construction, earthworks and vegetation removal.
- Weed and pest control.
- Aircraft refuelling.
- Equipment refuelling.
- Vehicle and aircraft cleaning.
- Aircraft, vehicle and equipment maintenance.
- Collection, storage, handling, use and disposal of hazardous materials.
- Waste management infrastructure and storage.
- Upstream land uses.
- Known and potentially contaminated sites.
- Potential malfunction of sewerage collection and wastewater treatment.

These activities may cause:

- Contamination from spillage, leakage or seepage into storm water infrastructure.
- Disturbance of known and potentially contaminated sites.

- Changes to the upstream or downstream flooding regime and possible disturbance of local water drills.
- Increased flow velocities, leading to erosion.
- Creation of mosquito-breeding habitat leading to public health risks.
- Attraction or spread of pest animals and weeds.
- Possible disturbance of local fauna and flora.

8.2 Water Management Plan

FG will develop an effective water management procedures aiming to eliminate any potential surface and groundwater environment disturbance.

Surface and groundwater quality will be monitored at various sites regarding physicochemical parameters by using:

- monitoring boreholes
- surface water samples across the airports.

All chemical analysis will be conducted in licensed and certified laboratories.

Greek legislation does not specify certain monitoring parameters for storm water quality. However, the Approved Environmental Terms refer to storm water quality and impose preventive measures. Such measures are:

- drainage systems (channels, ditches and pipelines networks),
- oil-separators and
- sand traps.

in order to ensure that all storm waters are free off oils or other pollutants.

Measures to manage potential impacts to surface water and groundwater quality include:

- Implementation of relative Environmental Terms for each airport.
- Spill response and reporting procedures.

- Waste handling procedures.
- Vegetation removal and weed and pest control procedures.
- Installation and maintenance of storm water treatment devices (oil-separators and sand traps).
- Tenant and construction audits with routine inspections.
- Incorporation of existing surface water and groundwater information during planning the new developments (imminent works).

- Drainage infrastructure designed and modelled to prevent potential flood impacts.
- CEMP's will be prepared for relevant construction projects addressing potential surface water and groundwater impacts.

FG will regularly inspect the airport, tenant, contractor and operator activities. Where there is water contamination or impacts to the drainage network caused by their operations, airport operators will be required to undertake relevant measures to monitor, manage or remediate the impacts

Target	Timeframe
Install storm water quality protection infrastructure (oil-separators, sand traps) as necessary	Up to 2021 (Imminent Works completion)
Water management procedures.	Ongoing - within 1st year of operations
Ensure CEMPs incorporate measures to reduce potential adverse impacts to surface water and groundwater associated with construction activities.	Ongoing – Prior to Imminent Works commencement

Table 6 Targets for water management.

8.3 Achievements

Already since 2016, an [Environmental Baseline Survey](#) located all contaminated areas.

In all 14 airports specialized personnel conducted on site visits in order to record the existing contamination. In each airport a number of boreholes were performed in order to examine both surface and underground water contamination.

The works were split in two phases where the following were achieved:

Phase I

- Collection and analysis of all available baseline data (surface and groundwater samples).
- Site visit and inspection of the operating companies
- Detection of areas of environmental concern
- Inventories of water bodies and groundwater

Evaluation of the collected desktop and site visit data a specific groundwater sampling and analysis program was finalized for the next

investigation phase (Environmental Phase II investigation).

Phase II

- Definition of the groundwater conditions at the selected areas of environmental concern at the airport site.
- Assessment of the environmental risk stemming on potential groundwater contamination for the specific site.
- Proposal of necessary actions for the protection of groundwater.

Each survey concluded in proposing remedial actions, for groundwater contamination especially for reducing the concentrations of petroleum hydrocarbons and chlorinated hydrocarbons such as:

- Pump and treat technique. Granular activated carbon (GAC) and aeration technique for the removal of organic contaminant in waters.
- Groundwater monitoring system. This includes the groundwater sampling and analyses twice a year, once within the period September- October and again within the period March-April.

9 Biodiversity

9.1 Overview

FG values greatly the protection of the ecosystems and plans to:

- appropriately manage biodiversity values across the network of its 7 airports,
- reduce adverse impacts to surface water (lakes, lagoons and sea) and groundwater from airport activities and
- protect and enhance the ecological values of conservation areas.

As mentioned previously the majority of the airports, especially SKG, KVA, CFU, ZTH, are within or in close proximity of protected areas with great ecological value.

Wildlife Hazard Management

The presence of certain wildlife (large birds, foxes, wolves etc.) at airports can pose a significant risk to aircraft safety.

FG is establishing a Bird and Wildlife Management Program to proactively manage bird and wildlife strike risk.

Under the program, habitat is managed to limit attracting large or flocking wildlife species. Active dispersal of bird and wildlife hazards occurs.

The wildlife management takes into consideration the following principles:

- [Nonlethal Bird Techniques](#) by use of the bioacoustics method for bird dispersal to scare birds (with portable and vehicle installed systems).
- [Habitat management and landscaping techniques](#) that reduce the attractiveness to birds.
- [Monitoring and movement of birds](#) away from aircraft.
- [Cooperation with Non-Government Organizations \(NGO's\)](#) such as the Archipelagos, Archelon, National Marine Park of Zakynthos etc.

FG manages biodiversity at the airports and works to reduce the potential impact of its operations on the biodiversity of the surrounding area.

Some activities likely to affect biodiversity at each airport may be:

- Grounds maintenance activities including vegetation clearing and slashing.
- Weed and animal pest control.
- Hazardous wildlife control procedures.
- Vehicle or aircraft movements.
- Construction and demolition works.

These activities could cause:

- Reduced native biodiversity.
- Introduction and spread of weed and animal pest species.
- Fragmentation of habitat from clearing associated with new developments.
- Degradation of foraging or breeding habitat.
- Direct injury to fauna through vehicle or aircraft collision or wildlife hazard procedures.
- Loss of native species from weed, pest and fire management activities.

9.2 Biodiversity Management Action Plan

Actions that can be protective of biodiversity values are:

- Wildlife hazard management procedures and training.
- Grass-cutting and tree-cutting in certain time periods according to relevant Environmental Terms.
- Monitoring significant species. Especially in Zakynthos for the protection of the endangered species of Caretta-Caretta.
- Landscaping procedures and guidelines with an emphasis on using locally sourced, endemic species.
- Controlled spraying using biological pesticides (especially for overpopulation of species such as mosquitos).

- CEMP's prepared for relevant construction projects addressing potential biodiversity impacts

procedures are in place to manage specific environmental risks associated with their activities.

Airport tenants, contractors and operators are required to ensure appropriate systems and

Target	Timeframe
Wildlife Management Plan which will include consideration of biodiversity conservation (impact of bird strike in areas with high potential for sensitive bird species) for each specific site.	Ongoing - within 1 st year of operations
Ensure CEMPs incorporate measures to reduce potential adverse impacts to biodiversity associated with construction activities and eliminate risks associated with invasive species	Ongoing – Prior to Imminent Works commencement

Table 7 Targets for biodiversity

9.3 Achievements

FG has already submitted to the European Aviation Safety Agency (EASA), a general [Wildlife Hazard Management Plan](#) which will apply to all airports. The plan incorporates all the aforementioned objectives and actions.

10 Cultural Heritage

10.1 Overview

The sustainable and respectful management of the heritage values will be achieved by:

- Developing and maintaining a detailed knowledge of the heritage values that exists within and in the proximity of FG's concession areas;
- Identifying heritage values early on in the development process so that those heritage values can be considered, avoided and protected;
- Developing and submitting applications under relevant legislation, in consultation with relevant stakeholders, to impact those heritage values when that cannot be avoided;
- Developing and implementing procedures for appropriately managing heritage values using the guiding principles of avoid, protect and mitigate;
- Ensuring compliance with heritage legislation, associated statutory approvals and the provisions of the concession agreement; and
- Educating **FG** staff of the heritage values that exist within and in the proximity of **FG's** concession areas and the appropriate actions when interacting with these values.

FG's management of cultural heritage will follow procedures laid out in the Concession Agreement, consistent with the following practices:

- Test excavations to determine the existence of Antiquities.
- Vibration monitoring where necessary.
- Maintain the existing building structure, envelope, and interior non-structural elements of a historic building or contributing building in a historic district.

Some of the airports of Cluster A are in proximity of cultural heritage important values

(e.g. proclaimed archaeological sites, churches, monasteries, sites of important aesthetic value etc.). Especially in the case of Kerkyra (CFU) the proclaimed archaeological site of "Old Kerkyra Town or Palaiopoli" (GG 178/ΑΑΠ/2012) boundaries lie within the NE boundary of the concession area.

Activities with the potential to affect cultural heritage at the airports include any ground disturbing activities that could damage known or unknown heritage value. This would include:

- Grounds maintenance activities including vegetation clearing and slashing.
- Construction and demolition works.

10.2 Cultural Heritage Management Plan

A key measure to manage the cultural heritage values at the Airport will be the ongoing implementation of the whole of the airports Cultural Heritage Management Plan CHMP, which includes:

- Cultural heritage awareness training for staff and contractors.
- Preparation and implementation of project-specific CEMPs for relevant projects that affect cultural heritage values.
- Regular inspections of cultural heritage sites.
- Ongoing liaison with Indigenous stakeholders.
- During construction works when needed perform archaeological cross sections in collaboration with Archaeological Authorities.
- CEMP's prepared for relevant construction projects addressing potential cultural heritage impacts and Chance Finds procedure.

Target	Timeframe
Early identification and detailed understanding of heritage values within proposed development areas so that these may be appropriately considered.	Ongoing – Prior to Imminent Works commencement
Coordinate with Hellenic Ministry of Culture and Sports to develop corporate level cultural heritage procedure including chance finds procedure (in accordance with the requirements of Article 15 of the CA).	During Imminent Works
Develop site specific cultural management plans in cooperation with Greek authorities and ensure implementation by contractors.	Ongoing – Prior to Imminent Works commencement
Develop a Chance Finds procedure.	Ongoing – Prior to Imminent Works commencement
Develop and maintain a heritage database within and in the proximity of FG's concession areas.	Ongoing - within 1 st year of operations
Increasing awareness by FG staff and airport tenants of the diverse heritage values within FG's concession areas, the importance of these values and the process to protect these values.	Ongoing - within 1 st year of operations
Ensure CEMPs incorporate measures to reduce potential adverse impacts to cultural heritage associated with construction activities.	Ongoing – Prior to Imminent Works commencement

Table 8 Targets for cultural heritage

10.3 Achievements

Already for each airport **FG** has created a [Catalogue with relevant heritage sites](#).

The catalogue was part of the Heritage Action Plan that was implemented by FG and includes the following (where applicable) per airport:

- Archaeological places and their relevant protection zones.
- Places of significance to the cultural and spiritual beliefs.
- Artefacts and the remains of important structures.
- Sites of exceptional beauty and traditional settlements.
- Architectural landmarks & building of beauty and/or importance.

11 Air Quality

11.1 Overview

FG manages airport operations in a way that prevents air emissions causing a nuisance or harm to neighbouring receptors.

Some activities that generate air emissions include:

- Aircraft ground operations including refuelling.
- Vehicle and equipment operations.
- Use of air-conditioners, pumps and generators.
- General Aviation maintenance, including spray painting and paint stripping activities, workshop activities and cleaning operations using organic solvents.
- Use of ground power units and auxiliary power units.
- Grounds maintenance, including vegetation removal and weed control.
- Construction and demolition works.

These activities could cause:

- Air emissions, including greenhouse gases and potentially ozone depleting substances.
- Reduced visibility (mainly from dust or smoke).
- Public nuisance or health issues.
- Offensive or concerning odours (e.g. fuel odours).

11.2 Protective actions

Measures to manage potential impacts to air quality include:

- Environmental awareness and inductions.
- Monitoring plan and implementation of the measures imposed by the Environmental Terms. The plan will include type and frequency of monitoring parameters and monitoring equipment. The gathered data will be evaluated, air pollutant contours will be calculated, and the subsequent trends will be presented. Relevant measures will be adopted in case of limits exceedance.
- Appropriate collection and disposal of ozone-depleting substances from air-conditioning units.
- Maintenance of vehicles and equipment to prescribed standards.
- CEMP's for relevant construction projects addressing potential local air quality impacts including dust control measures.

FG is also planning the phased replacement of terminal package air-conditioners that use ozone depleting substances.

Airport tenants, contractors and operators are required to ensure appropriate systems and procedures are in place to manage specific air quality environmental risks associated with their activities.

FG will regularly inspect the airport, tenant, contractor activities. Where there are unacceptable air emissions caused by their operations, airport operators will be required to undertake relevant measures to monitor, manage or remediate the impacts.

Target	Timeframe
Ensure appropriate servicing and maintenance of equipment.	Ongoing – Throughout the concession period
Air monitoring plan for all airports	Interim monitoring plan ongoing - 2018
Ensure CEMPs incorporate measures to reduce potential adverse impacts to local and regional air quality associated with construction activities.	Ongoing – Prior to Imminent Works commencement

Table 9 Targets for air quality

11.3 Achievements

FG has already implemented an [Interim Monitoring Plan for Air Quality](#) in cooperation with the National and Technical University of Athens. The Plan was submitted to the Ministry of Environment and Energy as an Annex to the Modification EIA studies.

Additionally, in the aforementioned studies Air Quality Modelling was presented depicting the expected air quality in relation to the passenger forecast for upcoming years.

12 Noise

12.1 Overview

Noise requirements apply to noise associated with ground-based airport activities and aircraft landing and take-off procedures as well as ground running and idling on aprons.

Noise receptors surrounding the airport that could be affected are predominantly the surrounding or adjacent in some cases, urban areas and local fauna.

During maintenance and imminent works noise will be carefully managed to reduce off-site impacts.

FG will manage noise in such a manner so as to ensure it does not cause nuisance to, or adversely affect, neighbouring receptors. Activities could generate noise may be:

- Aircraft landing and take-off procedures.
- Aircraft ground running and idling on aprons.
- Aircraft maintenance and testing activities.
- Fixed and mobile equipment.
- General airport and infrastructure maintenance activities.
- Internal road network traffic.
- Tenant and operator activities.
- Construction and demolition works (temporary only for the duration of imminent works implementation).

These activities could cause:

- Nuisance to airport operators and the community
- Disruption in roosting and breeding behaviour of local fauna.

12.2 Noise Management Plan

FG plans to produce a noise management plan during the operational period, for each airport.

Monitoring plan and implementation of the measures imposed by the Environmental Terms. The plan will include type and frequency of monitoring parameters and monitoring equipment. The gathered data will be evaluated, noise contours will be calculated, and the subsequent noise trends will be presented. Corrective actions are implemented in case of limit exceedance.

Measures to manage potential impacts from noise emissions include:

- Environmental awareness and inductions.
- Recording, investigation and follow-up of noise enquiries.
- Implementing operational procedures for noise-generating activities.
- Implementing noise control measures through CEMPs as standard.
- Tenant and construction audits.
- Aircraft ground running policy and review of the policy in response to airport operational matters and tenant feedback.
- Regular servicing and maintenance of vehicles and equipment.

FG will regularly inspect the airport, tenants, contractor and operator activities. Airport tenants, contractors and operators will be required to ensure appropriate systems and procedures are in place to manage specific noise-related environmental risks associated with their activities.

Target	Timeframe
Noise Monitoring Plan and implementation of it.	Interim monitoring plan ongoing - 2018
Timely investigation of any reported inappropriate noise generation	When required
Ensure all CEMP(s) incorporate measures to minimize potential adverse noise impacts associated with construction activities.	Ongoing – Prior to Imminent Works commencement

Table 10 Targets for noise

12.3 Achievements

FG has already implemented a [Noise Baseline Survey](#) for the peak period of 2016 at each airport, which included on site measurements and raw data collection. The data were evaluated, noise contours were calculated, and the subsequent noise trends were presented.

Additionally, FG has implemented an [Interim Monitoring Plan for Noise](#) in cooperation with the National and Technical University of Athens. The Plan was submitted to the Ministry of Environment and Energy as an Annex to the Modification Dossiers of the EIA studies.

Additionally, in the aforementioned studies Noise Modelling was presented depicting the expected noise levels in relation to the passenger forecast for upcoming years.

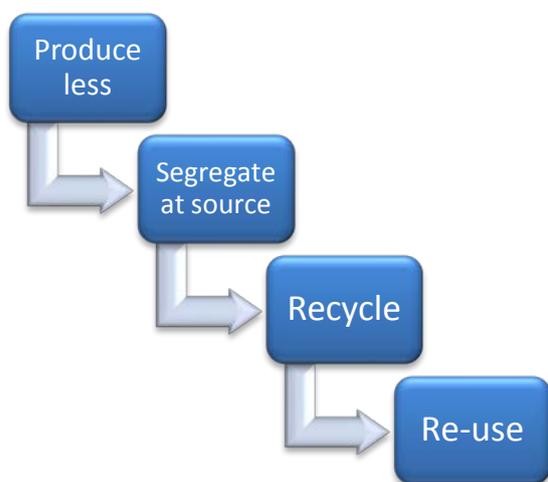

13 Waste Management

13.1 Overview

FG will ensure the storage, handling and use of waste materials (hazardous and non-hazardous) is carried out in accordance with applicable legislation, standards and state planning for waste management.

The main objective is to **produce less waste** where possible. **Waste segregation at the source** will be promoted for all personnel and tenants.

Recycling and **re-use** are both of great importance for **FG** and will be implemented throughout the operational period including construction works.

Graphic 2: FG's main objectives regarding waste management

Airport operations inevitably produce solid waste on a daily basis from a variety of sources involving personnel, passengers, tenants and handlers. Also, a variety of hazardous materials are used such as lubricant and mineral oils, batteries and accumulators, tires, electronic and electrical equipment etc. Hazardous materials have the potential to cause harm to persons, property or the environment. As a result, they should be handled and used in an appropriate manner. Where feasible, **FG** will substitute, reduce or eliminate the use of hazardous materials and those used will be appropriately recycled according to relative legislation.

Airport tenants retain responsibility for solid waste as well as hazardous materials held in individual premises.

Some activities related to hazardous materials may be:

- Bulk fuel storage and handling including aviation, unleaded and diesel fuels.
- Aircraft refuelling, vehicle and aircraft wash down.
- Vehicle refuelling at the service station.
- Aircraft, vehicle and mechanical plant and electrical equipment maintenance.
- Construction, earthworks and demolition.
- Quarantine operations.
- General airport operation, construction, maintenance and landscaping including weed and animal pest control.

These activities could cause:

- Release of hazardous materials, leading to water, land and air contamination.
- Human and ecosystem health impacts.

13.2 Waste Management Plan

Waste Management Plan procedures will be developed so that waste streams are properly identified, segregated and treated, along the following lines:

- Separation of solid waste types at the point of generation. Use of specially designed waste bins for separation of paper, metal-plastic, glass and organic.
- Dedicated areas for the collection and storage of recyclable materials
- Hazardous waste disposed and recycled properly by certified handlers.
- Waste containers around the airport for passengers and tenants - transferred to onsite dumpsters and compactors, then transported to an offsite processing facility.
- Airport offices recycle paper, batteries, tonners, electrical devices.

FG's Health and Safety procedures – details procedures in relation to storage, handling and disposal asbestos and other hazardous

materials, maintenance of asbestos register, Health and Safety incident reporting, etc.

Airport tenants, contractors and other airport operators are also required to ensure appropriate systems and/or procedures are in place to manage specific environmental risks associated with their activities and abide by the relevant legislative requirements for waste management.

FG will regularly inspect the airport, tenant, contractor and operator activities to check environmental risks associated with their activities in relation to hazardous materials are being managed appropriately.

Management of hazardous materials is also addressed through CEMPs for relevant construction projects.

Hazardous materials in relation to **FG's** activities will be managed under different mechanisms depending on the nature of the activity.

These mechanisms include:

- Environmental Management Plan – includes procedures for spill response, interceptor trap maintenance, environment incident reporting, tenant audits etc.

- Airport Emergency Plan – details procedures for dealing with major incidents in relation to hazardous materials, fuel and oil spills.

In regard to the asbestos materials an Asbestos Management Plan will be implemented were the following actions will be included:

- a. Labelling of the materials as asbestos containing materials.
- b. Notification of the personnel working in the vicinity of these materials.
- c. No disturbance of the asbestos materials.
- d. Proactive painting of the external surfaces with plastic painting (optional).
- e. Optimal solution: Programmed removal of the asbestos materials by a specialized and licensed company.
- f. Following asbestos removal the premises must be assessed conducting visual inspection and air monitoring in accordance with relevant Greek legislation for issuing Clearance Certificates – Certificates of Reoccupation. The assessment should be carried out by independent laboratory accredited by Hellenic Accreditation System (ESYD) for asbestos air sampling and analysis.

Target	Timeframe
Asbestos Management Plan.	Ongoing – Prior to Imminent Works commencement
Pilot Waste Management Plan for SKG with transferability for other airports.	Fall 2017
Monitor chemical storage and handling practices during internal and tenant audits.	As per internal and tenant audit schedule
Monitor availability of up-to-date Materials Safety Data Sheets at points of use during internal and tenant audits.	As per internal and tenant audit schedule
Ensure CEMPs incorporate measures to reduce potential adverse impacts associated with the storage, handling and use of hazardous materials associated with construction activities.	Ongoing – Prior to Imminent Works commencement

Table 11 Targets for hazardous waste

13.3 Achievements

Actions already achieved:

Contracts with Alternative Management Systems for the recycling of hazardous waste such as oils, batteries, tires, electronic and electrical equipment.

Asbestos Baseline Evaluation in order to identify the current conditions regarding the presence of asbestos materials in the existing infrastructure of the airport's buildings. In each airport all asbestos materials were identified and characterized as low, medium or high risk. For the management of these materials recovery actions were proposed and removal will take place as part of Imminent Works.

14 Conclusion

The 2017 Environmental Strategy Report is not a business as usual strategy. The commitments, goals and initiatives will be challenging to plan, launch and deliver.

The targets are difficult but we believe they are realistic. This plan is visionary and will take concerted investment, coordination and changes in culture to achieve but it supports and is supported by **FG's** Mission, Vision, Values and Strategic Plan.

FG will monitor and report annually on progress against our goals and the lessons learned and will seek regular feedback and input on how to do better.
